

# iRasus

Energy Intelligence for a Greener World

# What is iRasus

The world is in flux as it shifts to batteries. Transitioning to batteries comes with its challenges. We want to make this shift easier, safer, quicker, and less costly while being pioneers in the cleantech movement.

iRasus is a deeptech organisation developing analytical products to solve battery-related problems faced by stakeholders located across a battery's value chain. Our products are used to solve key battery management and operational problems in the E-Mobility, Stationary Assets, Charging and Battery Manufacturing Sectors.

# Who are we

2019

We have been working with key players in the battery space since the past 5 years.

7500+

5B+ data points across 7.5K+ assets have been processed to deliver Insights.

1000+

The industry is new. Our product has learnt to evolve with our clients. We have processed 1000+ metrics in real-time.

# Our Founders

**Arjun Sinha Roy**

CEO & CO-FOUNDER

---

BITS Pilani 1994-1999

Economics + Mechanical Engineering,  
20 years in telecommunication, IoT, energy  
efficiency, renewable energy.

**Anirudh Ramesh**

CTO & CO-FOUNDER

---

BITS Pilani 2012-2016

Electrical and Electronics Engineering,  
5 years in electronic product development for  
sports, defense, and energy & power

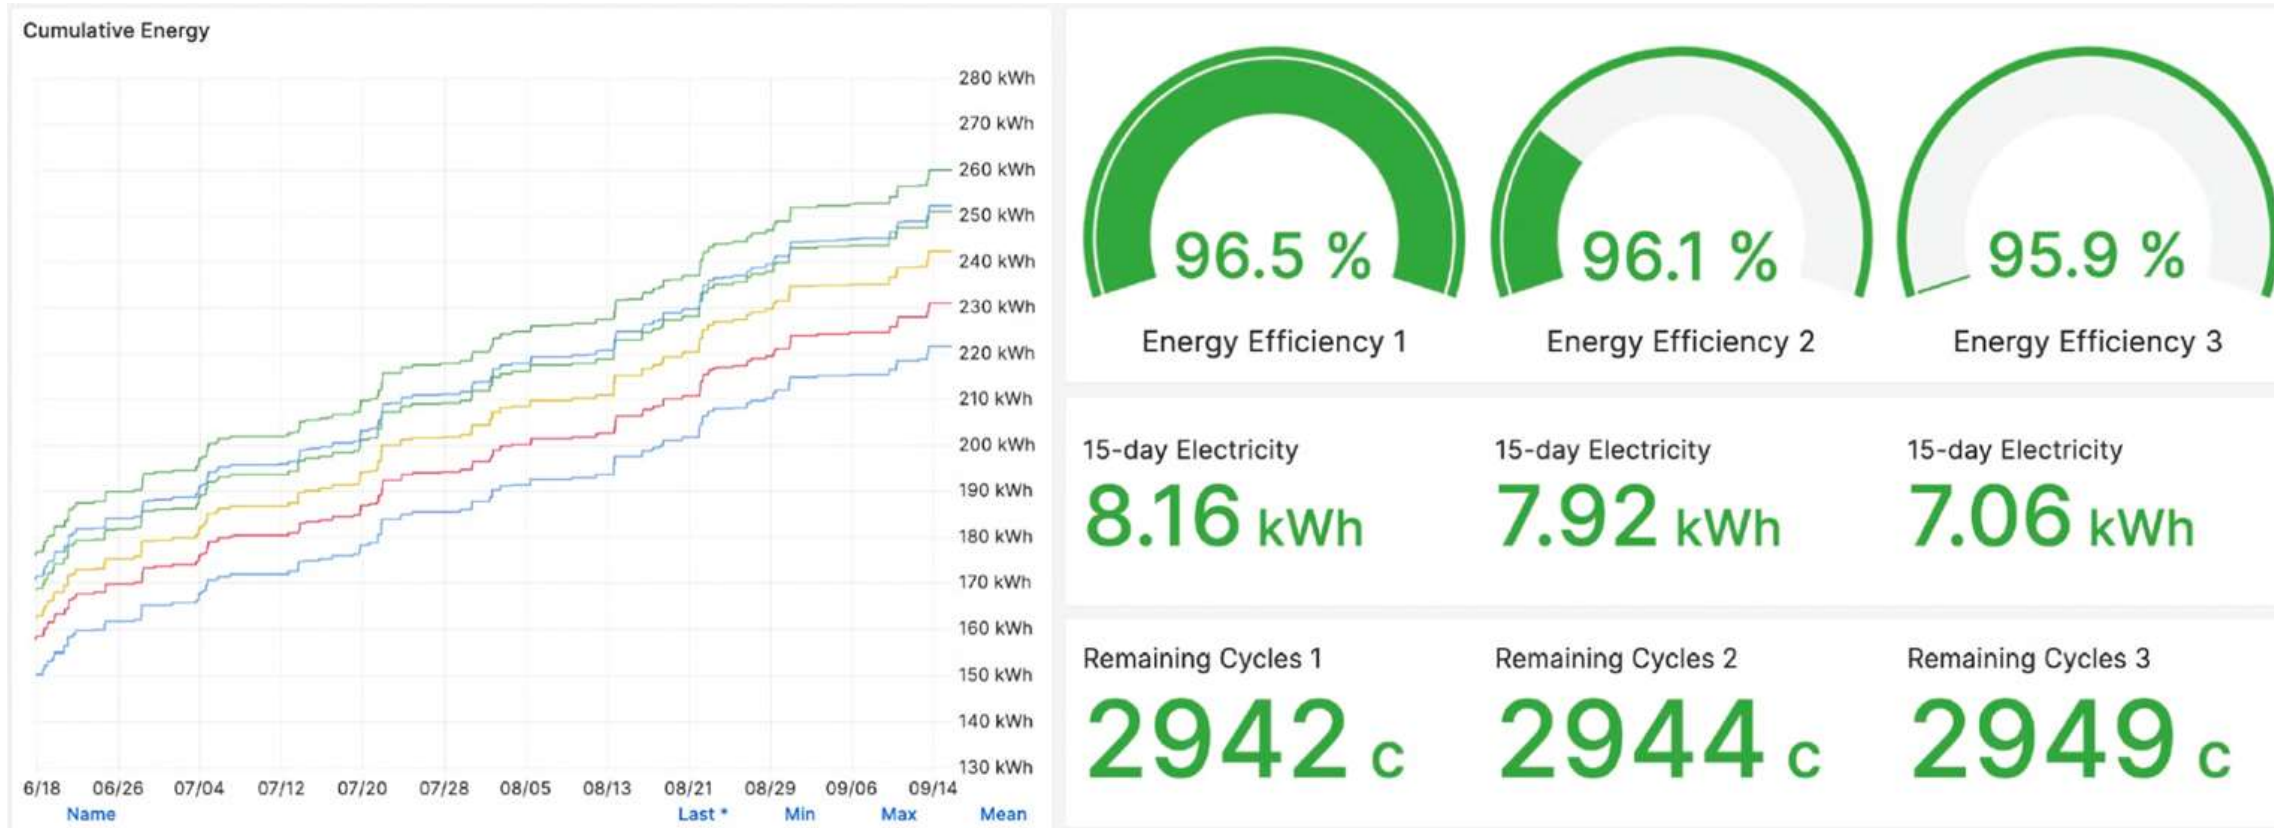

# Introducing Preksha

Preksha is our SaaS offering that simplifies the process of working with batteries and their data.

Accessible via web and mobile, it allows you to be in control of your batteries, understand insights,

and to use those insights to safely and optimally conduct your operations.

**Preksha 3.0** iRASUS T

SIM Cards Battery Packs Charger Vehicles Vehicle Control Units Position Trackers

**Hi Test, Optimize Your Asset Management With Real-Time Insights**  
Track, monitor, and manage all your assets and batteries from a single dashboard—gain full visibility into asset locations, counts, and performance at a glance.

- Simplifying battery and adjacency asset management and analytics
- Monitor faults and conduct RCA

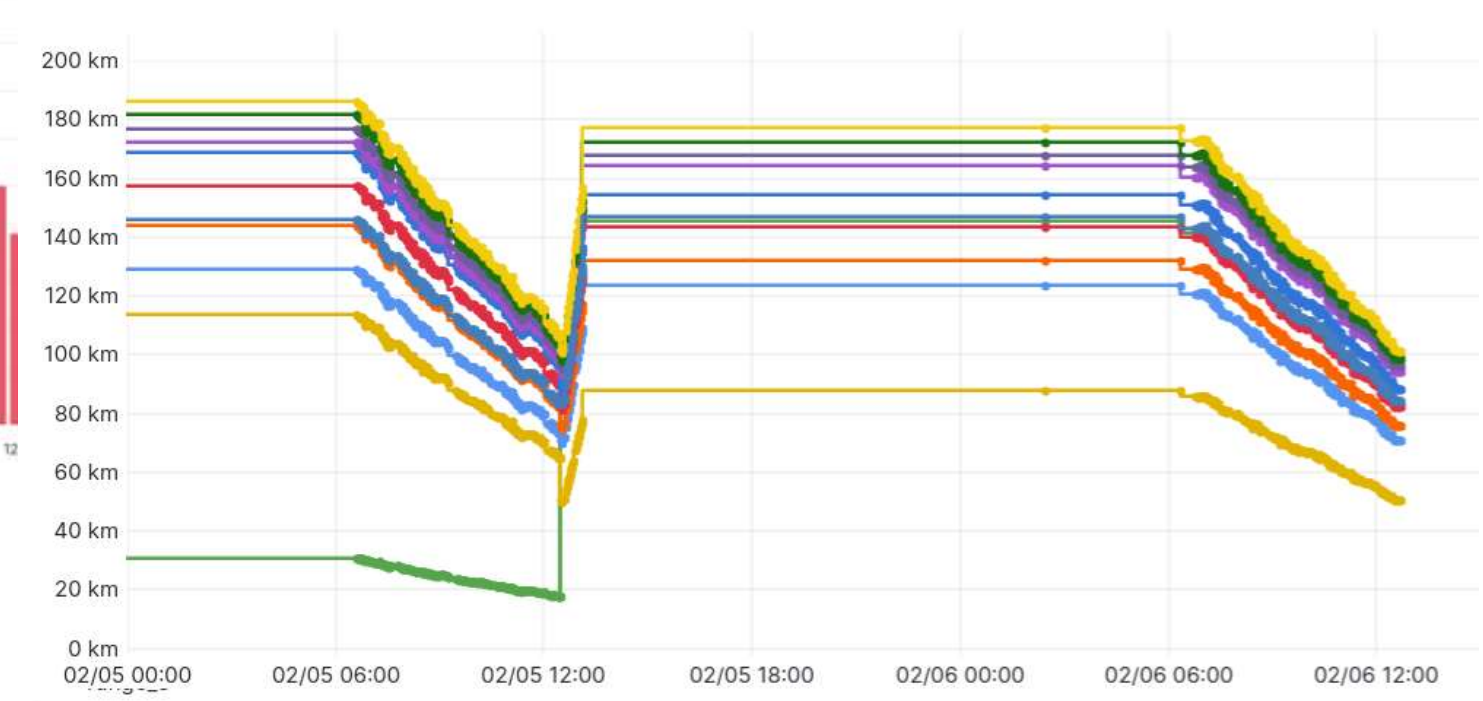

State Duration (per day)

Mileage (per day)

Range (per timestamp)

- Real-Time insights into organisation-wide operations
- 1000+ indicators being monitored in real-time to generate your battery profile
- On the go RCA-aided exploration designed by battery system experts

# Key Features - I

## Battery Health Metrics

- Gain real-time insights into hundreds of battery metrics
- Proactively identify potential issues to prevent battery health degradation

## Remote Diagnostics & Alerts

- Set and get instant notifications of faults and anomalies
- Prevent costly downtime and safety hazards

## Location and Geofencing

- Monitor battery in real-time and establish virtual geofencing
- Ensure proper route planning and prevent unauthorized movement

# Key Features - II

## AI Models

- Build on top of cleaned data via our machine learning stack
- Predict remaining range, tag points of interests, estimate state of health and much more with our intelligent models

## API Integration

- Integrate with existing fleet management systems
- Streamline workflows and facilitate data-driven decision-making

## Reporting & Analytics

- Access insights into battery performance through real-time reports
- Make informed decisions across your operations
